Forecast for Tuesday 29 Jun 2021

Weather: Generally cloudy during the early hours and at first Tuesday morning with some outbreaks of light rain and some fog on the summits. The rain will clear southwards mid-morning onwards with the cloud breaking to give some bright or sunny spells by midday. Some spells of strong sunshine are likely at times through the afternoon, and these may trigger an isolated shower. Any showers should be short lived and the evening will be dry with clear spells.

Chance of cloud free mountain/hill tops above 800m: 60% improving to 95% or better in the afternoon.

Visibility: Generally good at low levels, but some local deteriorations to moderate in rain, with some patchy cloud on slopes above 800m, covering the higher peaks. Improving to more widely good as the rain clears, however further patchy low cloud may affect some north and northeastern slopes above 400-500m at times during the morning and early in the afternoon, bringing locally poorer visibility on higher slopes, and with only hazy views at lower levels beneath the cloud. Any isolated afternoon showers may briefly obscure views of nearby hills. Excellent visibility through the evening with cloud clear of the summits.

Meteorologist's View

Some murky conditions are likely on some north and northeastern slopes at times during Tuesday morning and at first in the afternoon. Strong sunshine is expected during any sunny spells in the afternoon and so sun protection is advised.

Forecast for Wednesday 30 Jun 2021

Weather: Dry with clear spells during the early hours, with some patchy fog and low cloud developing in valleys for a time around dawn. The morning will be dry with some sunny spells, but a few showers are likely to develop during the afternoon, these fading later to leave a dry evening with partly cloudy skies.

Maximum wind: Northerly 10-15mph.

Chance of cloud free mountain/hill tops above 800m: 70% becoming 95% or better by midday.

Visibility: Locally poor in any valley fog around dawn, and with some shallow banks of low cloud briefly bringing poor visibilities on slopes above 300m as the fog lifts and clears. Otherwise generally very good visibility at low levels with some patchy cloud briefly developing on slopes above 600-800m mid-morning, this lifting clear of the summits by midday, and with only brief temporary deteriorations in any afternoon showers.

Temperature: **Valleys:** Plus 11 Celsius becoming Plus 21 Celsius
At 800m: Plus 13 Celsius.
Freezing level: Well above the summits.
